

## Meeting the Reporting Requirements

This Carbon Reduction Plan complies with PPN 06/21, as published by the Cabinet Office in June 2021. This document will be reviewed and updated annually in accordance with industry standards and regulatory requirements.

### Baseline Carbon Emissions

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Baseline year: 2024-25</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Additional Details relating to the baseline emissions calculations.</b><br><br>M&D Care Ltd is a private limited SME company. While we are not obligated to report our emissions under the Streamlined Energy and Carbon Reporting (SECR) regulations, we are committed to environmental responsibility. To demonstrate this commitment, we began recording our emissions in 2024-25, which serves as our baseline for measuring and improving our environmental impact. |
| <b>Out total baseline emissions for 2024-25 are 520,732 kg CO<sub>2</sub>e.</b>                                                                                                                                                                                                                                                                                                                                                                                             |

### 2024-25 Carbon Emissions Overview

To ensure transparency and a comprehensive assessment of our environmental impact, we are recording emissions data associated with our office at Inspiration Centre, Ty'r Onnen, Parc Pensarn, Carmarthen, SA31 2NF.

In our baseline year, we operated with 641 employees. While we have one primary office, as a care provider, our operations are also conducted within residential and supported living schemes. As our business grows, we anticipate a proportional increase in emissions. This potential rise is factored into our Carbon Reduction Plan, ensuring that we take appropriate measures to mitigate and offset any increases while maintaining our commitment to sustainability.

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scope 1</b> | We lease 21 vehicles as part of our operations. This is made up of approximately 30% petrol cars and 70% diesel cars. During 2024 period, our fleet collectively covered an estimated total distance of <b>306,164.50 miles</b> . As part of our commitment to improving accuracy and reducing our environmental impact, we aim to implement more precise tracking methods in the future.<br><br><b>Our total Scope 1 emissions for the 2024-25 period are 83,007 kg CO<sub>2</sub>e.</b> |
| <b>Scope 2</b> | Our Scope 2 data consists of electricity and gas purchased across our office. Energy is purchased on a standard tariff.<br><br><b>Accordingly, our total Scope 2 emissions for the 2024-25 period are 341,137 kg CO<sub>2</sub>e.</b>                                                                                                                                                                                                                                                     |
| <b>Scope 3</b> | Approximately 96.06% of our Scope 3 emissions originate from business travel and employee commuting. For employee commuting, we have based our estimates on the following assumptions: <ul style="list-style-type: none"><li>• 30 FTE employees commute to the office five days per week</li><li>• Each employee lives an average of 30 km from the office</li></ul>                                                                                                                      |

- Commuting is calculated across 48 working weeks per year

Currently, we do not have detailed data on the vehicle/fuel type used by commuting staff. As an interim approach, we have applied the same fuel type proportions as our company vehicle fleet (approximately 30% petrol and 70% diesel) to model commuting emissions. Going forward, we will strengthen our data collection processes to capture more accurate information on vehicle types, fuel usage and low-carbon travel across our Office staff.

For business travel, we have used employee mileage claims in private vehicles as the primary data source and totalled this for the entire year. This covers all 641 staff and includes travel undertaken while supporting services, visiting Service Users and attending training. At this stage, we do not have data on the details of the private vehicle models. As such, we have applied the same petrol/diesel weighting used for company cars. Going forward, we will improve our Scope 3 business travel reporting by collecting vehicle-specific and travel mode data at the point of claim, supplemented with staff travel surveys and digital tracking tools to ensure more accurate emissions calculations.

| Activity                  | Type                       | KG CO <sub>2</sub> e |
|---------------------------|----------------------------|----------------------|
| <b>Waste</b>              | Total                      | 1,350                |
| <b>Managed Assets</b>     | Water Supply               | 1,939.66             |
|                           | Water Treatment            | 508.37               |
| <b>Employee Commuting</b> | Car – Petrol               | 17,766               |
|                           | Car – Diesel               | 42,799.68            |
| <b>Business travel</b>    | Car - Petrol               | 9,432.16             |
|                           | Car - Diesel               | 22,722.80            |
|                           | Total kg CO <sub>2</sub> e | 96,519               |

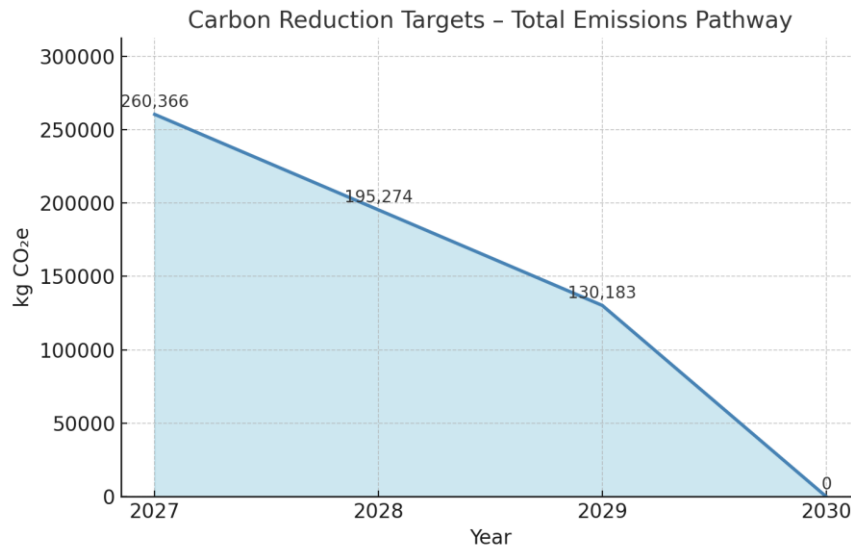

**Our total Scope 3 emissions for the 2024-25 period are 96,519 kg CO<sub>2</sub>e.**

## Emission Reduction Targets

To continue our progress toward achieving Net Zero by 2030, we have adopted an Absolute Contraction Approach to carbon reduction. Our targets are as follows:

- 2027: Target of 50% Carbon reduction to 260,366 kg CO<sub>2</sub>e
- 2029: Target of 75% Carbon reduction to 130,183 kg CO<sub>2</sub>e
- 2030: Target of 100% Carbon reduction to Net Zero

## Carbon Reduction Plan M&D Care

**Figure 1: Our carbon reduction targets by year**

As illustrated in Figure 1, our targets project a significant initial reduction (50%). This ambitious approach is deliberate, recognising the urgent need to reduce carbon emissions. We also aim to improve our data tracking and monitoring processes to improve the quality and accuracy of the carbon related data in future years.

### Carbon reduction projects

The carbon reduction opportunities outlined in this section, once fully implemented, will reduce our GHG emissions annually, aligning with our goal of achieving Net Zero emissions by 2030.

#### Scope 1 actions

Based on our submitted ESOS plan to the Environment Agency, we commit to the following:

- Introduce a transport policy, expand vehicle monitoring, install EV charging points and replace expiring fleet leases with electric vehicles
- Develop and implement a low-carbon vehicle policy to guide fleet selection, route optimisation and driver behaviour
- Install telematics to monitor driving behaviour (for example harsh braking and rapid acceleration)

#### Scope 2 actions

- Invest in an energy management system to monitor and optimise energy use
- Introduce power management policies for hardware such as laptops, PCs, printers
- Optimise air-conditioning controls
- Install a solar photovoltaic array
- Install solar reflective window coatings (when budget allows)

#### Scope 3

##### *Business travel (including employee commuting)*

- Recruit within the local area to reduce travel needs

## Carbon Reduction Plan M&D Care

- We will interrogate our data from travel to better understand if and where carbon reductions can be made
- Continue to encourage the use of walking or public transport, particularly trains and car sharing
- Continue to support and encourage hybrid/homeworking
- Encourage the continued use of virtual meeting platforms where possible
- Promote cycling to work by providing information and participating in cycle-to-work schemes

### *Waste management and reduction*

- Work towards a paperless office
- Work with our waste management provider to ensure we prioritise sustainability
- Complete waste audits to maximise recycling and minimise waste production
- For non-recyclable waste we will establish relationships with local energy recovery facilities

## Declaration and sign-off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standards for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and use the appropriate government emission conversion factors for GHG company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with Streamlined Energy and Carbon Reporting (SECR) requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the Board of Directors.

Signed on behalf of M&D Care:
